K-12 Standards for Optimal Sexual Development

Founded on Positive Character and Healthy Relationships

a framework for empowering health and wholeness
Greetings to all who work for the health and well-being of today’s young people!

After practicing for 28 years as a board-certified obstetrician/gynecologist, authoring books on sexual health, advising on the Presidential level as well as at the Centers for Disease Control and Prevention, and founding Medical Institute for Sexual Health, I have never been prouder to launch a document that has the potential to positively affect the individual, the family, and the society at large.

K-12 Standards for Optimal Sexual Development presented here involve a primary prevention approach to whole-person health. They aim to appreciate and protect the dignity and worth of every individual. They include the acquisition of social competencies and emotional intelligence to maximize a healthy, happy adolescence and, eventually, a more satisfied and healthy adulthood. They showcase the developmentally-appropriate steps to building optimal sexual health that are grounded in positive character and healthy relationships.

As important as it is to avoid the pitfalls of high-risk behavior, so is the need to embrace the benefits of promoting the avoidance of early sexual activity. Immediate advantages keep youth healthy and safe as they mature. Their understanding of long-term gain can lead to an appreciation of healthy marriage, from which, according to research, numerous positive outcomes accrue in physical and emotional health, and family stability and well-being.

That is why I am so pleased to introduce these new standards. The research that has informed these standards is current and reliable. Since 1992, Medical Institute has been committed to advancing wholeness with the best science, enabling us to maintain our integrity as a leader in sexual health education.

We who care about the next generation and their ability to flourish in all facets of life must advance that which empowers youth the most — a healthy outlook toward their future, which includes their sexual choices.

I urge you to share this document far and wide. Educators, administrators, parents, youth leaders, school board members, policy makers, and so many others need the guidance presented here.

Thank you on behalf of the many children who will benefit from these standards!

Sincerely,

Joe S. McIlhaney, M.D.

INTRODUCTION

The World Health Organization has defined health as “a state of complete physical, mental and social well-being, and not merely the absence of disease or infirmity.” The definition speaks to the whole-person nature of health – body, mind, and relationships with others. K-12 Standards advance this concept by illustrating the pathway toward thriving, human flourishing, wholeness, and optimal health. A result of two years of collaborative research and development by leading national educators in the fields of sexual health, character, and relationship education, these standards provide a framework that will guide policy makers, curriculum developers, educators, and parents in their efforts to maximize student success.

**K-12 Standards.** The Centers for Disease Control and Prevention states, “Healthy students are better learners,” and “Schools play an important role in promoting the health and safety of children and adolescents by helping them establish lifelong health patterns.” Children learn best when they are healthy — physically, mentally, and socially. To achieve their highest academic potential, students need knowledge, skills, guidance, and support for healthy decision-making. These standards set clear expectations for attitudes and behaviors that will help students succeed in elementary, middle, and high school, and on into adulthood.

**Optimal.** The U.S. Department of Health and Human Services defines optimal health as “a dynamic balance of physical, emotional, social, spiritual and intellectual health.” Optimal health is “a holistic focus with the aim of attaining the best possible health outcomes by promoting healthier behaviors and not merely the absence of disease.” A focus on optimal health outcomes begins with a primary prevention approach to population health. K-12 Standards adopt this emphasis as they guide sex education for school-aged children, kindergarten through high school.

**Sexual Development.** Sex is a normal and wonderful part of the human experience. As such, these standards address healthy sexual development — from preparing for puberty, navigating adolescence, and entering adulthood — with a primary prevention approach. Regarding optimal sexual health, the U.S. Office of Population Affairs states, “The population approach to sexual health should be a risk avoidance message. Optimal sexual health messages should be family- and community-centered, age appropriate, and culturally informed.” K-12 Standards present the benefits of postponing sex until healthy marriage, where it can be best experienced free from the many risks associated with nonmarital sexual activity.

**Positive Character.** The Center for the 4th and 5th Rs at the State University of New York at Cortland defines character as “consisting of strengths of mind (such as practical wisdom), heart (such as empathy and compassion), will (such as determination and courage), and skill (competence to translate mind, heart, and will into actions that benefit self and others).” Positive character is needed for positive human development, healthy relationships, and a flourishing society. Adults can foster young persons’ character development through example, direct instruction, and hands-on experiences that apply learning to life. K-12 Standards were written with positive character as the foundation for healthy relationships and optimal sexual development.

**Healthy Relationships.** Maslow’s Hierarchy of Needs places social needs, such as love and belonging, above primary physiological and safety needs. Healthy relationships with peers and adults are essential for positively navigating the many developmental changes children experience. K-12 Standards provide extensive content guiding students toward healthy family relationships, friendships, dating/romantic relationships, and marriage.

For the past twenty years, rates of teenage sexual activity, pregnancy, birth, and abortion have fallen steadily and significantly in the U.S. These are dramatically increasing, as are pornography use and addiction, sexting and sex trafficking. High-risk behaviors, such as sharing of needles and anal sex, further fuel STD/STI transmission. Media and social media messages, readily accessible through today’s advanced technology, are filled with misinformation and portray harmful social norms pressuring young people to put their current and future health at risk. K-12 Standards present a comprehensive set of critically needed knowledge and skills to help protect school-aged children from negative cultural influences and empower them to make positive choices for achieving optimal health.

The process of educating children, for both schools and parents, across all grade levels and across all disciplines, is increasingly challenging. K-12 Standards are intentional in addressing character and relationship education as the foundation for optimal sexual health. In addition to other academic milestones, they will guide student achievement and maturity and hold the most promise for moving students toward a healthy future.
DISTINCTIVES

- Clear guidance and support are provided for all school-aged children to promote positive life goals and wholeness.
- The inherent value of every student is upheld, along with the opportunity to pursue current and future physical, mental, and relational health.
- Learning objectives are designed for all students, regardless of their socioeconomic or family status, ethnicity, culture or past sexual experiences (whether chosen or forced upon them).
- Content is inclusive of all students, irrespective of their sexual orientation or gender identity. The promotion of optimal health for every student, by definition, fosters mutual respect in the classroom.
- Content is medically accurate, research-aligned, age-appropriate, and educationally sound for classroom instruction.
- The framework is intentionally based on primary prevention, which drives the learning objectives toward sexual risk avoidance rather than merely sexual risk reduction.
- Parents and family are affirmed as the primary influence on their children’s values, attitudes, and behaviors.

KEY THEMES

- Resilience and overcoming personal challenges to achieve current and future success
- Refusal skills and boundary setting in the context of healthy relationships and communication
- Future planning skills and strategies for fostering life success
- Positive and negative influence of peers and culture
- Positive and negative influence of technology and social media
- Prosocial value of healthy marriage and family formation
- Information on pregnancy, STDs/STIs and emotional risks of teen sexual activity, along with accurate information about contraception
- Prevention of sexual abuse, including sexual harassment, dating violence, rape, and sex trafficking
- Dangers of sexting and pornography

FEATURES

Four Key Topics: Positive Character, Healthy Relationships, Optimal Sexual Development, and Sexual Risks

The key topics are purposefully ordered, so that positive character lays a strong foundation for healthy relationships, and healthy relationships lay a strong foundation for optimal sexual development. The positive content in the first three topics contrasts with the risks presented in the fourth topic. The clear direction throughout K-12 Standards guides students to avoid risks and achieve optimal health.

Four Grade-level Groupings: Early Elementary, Late Elementary, Middle School, and High School

These age-appropriate standards are presented for four grade-level groupings: early elementary, late elementary, middle school, and high school. Given different school grade structures and regional population differences, these groupings are intentionally vague to allow for specific grade-level objectives to be determined at the state and local level. As indicated in the standards layout, the selected age group for each standard provides guidance for what should be accomplished by the end of that grouping. K-12 Standards consider both the physical and cognitive development of students when setting the standards for each academic level.

Adaptable Learning Objective Language

Bloom’s Taxonomy is a hierarchical classification of various levels of thinking used in formulating learning objectives. K-12 Standards focus on overall concepts, rather than Bloom’s action verbs, thereby allowing an instructor to adapt the breadth of the material across the four specified grade levels, as needed. As students achieve a greater understanding of each concept, they are able to process the information at a higher level. To the extent that more specific standards and curricula are developed from these standards, the application of Bloom’s Taxonomy would be appropriate.

Supporting References

K-12 Standards are scientifically accurate. Each key topic is supported by the associated references in the list of established studies with validated quality outcomes. The references are intended to provide sources for further reading to those seeking to find research and additional information related to each key topic within these standards. The references span a vast range of applied disciplines in pedagogy, social science, and medical/clinical foundations. Further research is ongoing in many of these areas, and the content and science teams are committed to continually updating the standards and references. Submissions for consideration of applicable sources that may provide additional insight or knowledge about the key topics are welcome.
K-12 Standards correlate with key principles in several nationally recognized education and public health publications. The five publications referenced here provide further substantiation to the content of the standards as listed in the description of each.

01 THE HEALTH EDUCATION CURRICULUM ANALYSIS TOOL (HECAT) AND CHARACTERISTICS OF AN EFFECTIVE HEALTH EDUCATION CURRICULUM

Centers for Disease Control and Prevention

cdc.gov/healthyyouth/hecat
cdc.gov/healthyschools/sher/characteristics

The Health Education Curriculum Analysis Tool (HECAT), published by the Centers for Disease Control and Prevention, is intended to guide the analysis and appraisal of health curriculum materials. The HECAT addresses opportunities that should be provided to students to encourage health-promoting decisions and health literacy, as well as adoption of health-enhancing behaviors that benefit themselves and others. The HECAT is guided by the CDC’s Healthy Schools Characteristics of an Effective Health Education Curriculum and the National Health Education Standards (NHES).

K-12 Standards closely mirror the planned progression of developmentally-appropriate lessons or learning experiences and continuity between lessons, as recommended by the HECAT. They correspond with the following HECAT Characteristics of an Effective Health Education Curriculum, as found in the HECAT:

- Focus on clear health goals, values, attitudes, beliefs, and related behavioral outcomes
- Are research-based and theory-driven, addressing the health determinants, social factors, norms, and skills that influence specific health-related behaviors
- Address individual and group norms that support health-enhancing behaviors
- Reinforce protective factors while informing about harmful exposure and potential risk
- Address social pressures and influences
- Develop skills for personal and social competencies and self-efficacy
- Allow for strategies designed to personalize information and engage students in ways that correspond with their cognitive and emotional development
- Are culturally inclusive
- Provide guidance for instruction across multiple ages and grade levels

Healthy People 2030 is a national initiative that uses data-driven objectives to drive the improvement of the health and well-being of the American population over the next decade. The effort is coordinated by the United States Department of Health and Human Services, Office of Disease Prevention and Health Promotion.

K-12 Standards align with multiple goals and objectives of Healthy People 2030, specifically related to adolescent health. They include:

- Increase the proportion of children and adolescents who can communicate positively with parents/adults, especially about serious problems
- Increase the proportion of adolescents who have never had sex
- Increase the proportion of adolescents who receive formal instruction on delaying sex, birth control methods, HIV/AIDS prevention, and sexually transmitted diseases before age 18
- Reduce pregnancy among adolescents
- Reduce bullying
SMARTOOL 2.0
The Center for Relationship Education
myrelationshipcenter.org/smartool

The SMARTool was funded by CDC-Division of Adolescent and School Health (DASH) and developed by The Center for Relationship Education. The SMARTool is an academically rigorous curriculum analysis tool that provides an evidentiary basis for sexual risk avoidance (SRA) education strategies. It is a resource that guides the assessment of sexual risk avoidance curricula to benefit schools, communities, youth-serving agencies, and other organizations interested in presenting SRA education to youth. K-12 Standards dealing with decision-making, commitment and goal setting, healthy relationships, optimal sexual development and sexual risks correspond with several of the SMARTool’s targets, including:
- Knowledge of physical development and sexual risks
- Healthy relationship development
- Personal competencies and self-efficacy
- Independence from negative peer and social norms
- Strengthened future orientation
- Parental involvement

DEVELOPMENTAL ASSETS FRAMEWORK
Search Institute
search-institute.org/our-research/development-assets/developmental-assets-framework/

The Search Institute’s Developmental Assets are 40 protective factors demonstrated in research to influence youth development positively and move them toward responsible and productive adulthood. External assets are the support, empowerment, boundaries, expectations, and constructive use of time which can be influenced and provided by adults and community surrounding youth. Internal assets are the personal skills, commitments, and values youth need to make healthy choices, take responsibility for their own lives, and be independent and successful.

K-12 Standards closely mirror a number of the principles underlying the 40 Developmental Assets, including its sections on:
- Positive Values (integrity, responsibility)
- Social Competencies (planning, resistance skills)
- Positive Identity (sense of purpose, positive view of future)

HUMAN FLOURISHING STUDY
Harvard University’s Institute for Quantitative Social Science
hfh.fas.harvard.edu/measuring-flourishing

Harvard University’s Institute for Quantitative Social Science Human Flourishing Study has outlined six measurable domains of Human Flourishing. K-12 Standards address each of these domains in age-appropriate ways. Multiple objectives in the four Key Topics of K-12 Standards focus on knowledge, attitudes and behaviors that are initiated early in life and predictive of future success in these domains:
1. Happiness and life satisfaction
2. Mental and physical health
3. Meaning and purpose
4. Character and virtue
5. Close social relationships
6. Financial and material stability
Education standards define clear learning objectives to be achieved by all students in different stages of development. Curriculum provides the specific instructional methodologies for teachers to use in preparing their students to meet the objectives. Essentially, education standards define what should be taught, while curriculum provides for how to teach it.

**K-12 Standards** can either be implemented in their entirety or serve as a model for writing state and local standards and/or curriculum. The concepts presented in each standard can be used to design specific learning objectives using Bloom’s Taxonomy, accounting for target audience, age appropriateness, cognitive development, cultural sensitivity, and other factors. They were intentionally developed to be adaptable for curriculum developers, educators, administrators, and parents. The knowledge and/or skills to be demonstrated in each standard can be specified for each grade level as needed.

According to the U.S. Department of Education, “The federal role in education is limited.” Due to the constitutional delegation of power set forth in the Tenth Amendment of the U.S. Constitution, most education policy is set at the state and local level. **K-12 Standards** are intended to guide state and local decision-makers in setting standards most responsive to the needs of their populations, and in selecting curriculum that will support their achievement. Parents and community members often influence the adoption of standards and curriculum selection. These standards can serve as an effective tool for assisting in these deliberations. They are intended for use in public and private school settings.

**K-12 Standards** are written for use in classroom instruction, as opposed to individual counseling or clinical intervention. While some of the topics addressed are personal, they are written to be taught in a public setting. As referenced in “Distinctives,” they were developed for all students, irrespective of their sexual orientation, gender identity, or sexual experience. Some subjects are sensitive or complex, and may be better addressed with individual attention to maintain student privacy and confidentiality. Students are always encouraged to discuss sexual topics further with parents and family members, and to seek individual counseling or clinical help when needed.

# Healthy Relationships

## A. FAMILY

*Members of a family can be the most important sources of love, support and guidance to promote personal health and well-being and create healthy communities.*

References: [39, 65, 71-81]

**STUDENTS WILL BE ABLE TO:**

1. Identify factors that contribute to the success and legacy of the family, such as empathy, kindness, honesty, respect, trust, overcoming adversity, patience and forgiveness.

2. Explain how healthy families typically share values, provide love and emotional support, set boundaries and limits, and help members achieve their full potential.

3. Identify parents, family members and trusted adults with whom to discuss the life cycle, (i.e., birth, growing, aging, and death).

4. Explain the importance of relationships with parents, family members and trusted adults for guidance and support in discussing sexual topics.

5. Describe ways in which media, social media, and technology can both strengthen and threaten family relationships.

6. Discuss how those from difficult family backgrounds can make healthy decisions and achieve healthy marriages and families of their own in the future.

7. Report on research regarding family structure and how it contributes to optimal health and well-being of children, adults and communities.

8. Compile research on the negative effects of adverse childhood experiences (ACEs), such as emotional and physical abuse, and how they can be overcome.

## B. FRIENDSHIPS

*Healthy friendships play an important role in human development and healthy decision-making.*

References: [82-89]

**STUDENTS WILL BE ABLE TO:**

1. List characteristics of healthy friendships, including empathy, sharing, kindness, honesty, respect, trust, cooperation, patience and forgiveness.

2. Identify benefits of healthy friendships and social supports for physical, intellectual, emotional, social and spiritual well-being, including encouragement to make healthy choices and achieve one’s full potential.

3. Demonstrate effective communication skills that will help make and sustain healthy friendships, including listening and using respectful language for sharing emotions and opinions.

4. Explain why good friends don’t encourage unhealthy choices, exploit each other, socially isolate, gossip, name call, bully or stigmatize.

5. Define and discuss positive strategies to address bullying, resolve conflict and provide positive peer support.

6. Describe how character strengths practiced in friendships, such as honesty and respect, contribute to healthy dating relationships and healthy marriages in the future.
# Healthy Relationships

## C. DATING

*Healthy and safe dating/romantic relationships, delayed until older adolescence, benefit from maturity, guidance and support.*

*References: [90-94]*

**STUDENTS WILL BE ABLE TO:**

1. Explain why healthy friendships are the best foundation for romantic relationships.
2. Compare and contrast characteristics of healthy romantic relationships (respect, consideration, kindness, encouragement, giving) with those of unhealthy relationships (disrespect, selfishness, exploitation, control, dishonesty).
3. Analyze factors to be considered in preparing for dating and marriage, including setting personal boundaries, respecting family guidelines, sharing values, exploring compatibilities and marriage partner selection strategies.
4. Discuss different reasons for dating and how it can positively or negatively influence short- and long-term life goals.
5. Compare and contrast advantages and disadvantages of one-on-one dating and group dating.
6. Outline healthy strategies for dating such as setting boundaries, dating in groups of trusted friends, delaying individual dating until older adolescence, and dating someone of similar age.
7. Compare and contrast love and infatuation (lasting commitment to the well-being of another person vs. emotional attraction that is usually fleeting, intense and often irrational).
8. List examples of verbally and nonverbally expressing affection in healthy, nonsexual ways.
9. List specific personal boundaries for healthy, nonsexual physical contact, and strategies for communicating them early in dating relationships to help prevent sexual activity and dating violence.
10. Identify characteristics of unhealthy relationships which can lead to dating violence, coercion and abuse, and describe strategies for seeking help and support.
11. Explore safe and respectful ways to end an unhealthy or unwanted romantic relationship.
12. Cite examples of how social media and cultural influences impact dating.
13. Present research showing that delayed dating is related to delayed onset of sexual activity.

## D. MARRIAGE

*Healthy, strong marriages contribute to healthy families and communities.*

*References: [95-110]*

**STUDENTS WILL BE ABLE TO:**

1. Define a healthy marriage as the mutually-committed, monogamous union of a couple, intended to be lifelong, that is granted rights and responsibilities by law.
2. Name qualities of a healthy marriage, such as mutual commitment, fidelity, respect, trust, compatibility, giving, service, effective communication, ability to resolve conflict, and sharing of values and goals.
Healthy Relationships

2.D.3. Identify the characteristics needed to sustain a marriage relationship through difficult times, including commitment, compromise, forgiveness, effective communication, perseverance, and seeking counseling when needed.

2.D.4. Specify the benefits of a healthy marriage, including a lifelong, committed caring relationship for the couple; increased financial stability; personal happiness and life satisfaction; and a safe and stable environment for raising children and building healthy communities.

2.D.5. List the elements of a healthy marriage that encourage intimacy and bonding, including trust, vulnerability and sexual fulfillment.

2.D.6. State that a healthy marriage is supportive of a person’s physical, intellectual, emotional, social, spiritual, and financial health and well-being; and, therefore, is the optimal context for sex.

2.D.7. Analyze how making healthy choices before marriage, including avoiding sexual activity, can strengthen fidelity in marriage.

2.D.8. Affirm that attributes of a healthy marriage can be learned and applied, regardless of family experience.

2.D.9. Discuss research that shows healthy marriage can be a protective factor against poverty, violence and abuse.

2.D.10. Explore research that suggests that healthy marriage is a better predictor of long-term commitment and stability than cohabitation.

E. PARENTHOOD

Nurturing and involved parents provide love and support for the healthy development of children.

References: [111-120]

STUDENTS WILL BE ABLE TO:

2.E.1. List responsibilities of parents, including providing food, shelter, love, protection, education and guidance for their children.

2.E.2. Discuss ways that parents teach values, most effectively through love, example and discipline.

2.E.3. Describe how parent-child connectedness can help children and adolescents make healthy choices as they mature, including decisions that foster healthy relationships and optimal sexual development.

2.E.4. List family responsibilities that can be shared by parents through teamwork, such as household chores, child care and financial obligations.

2.E.5. Identify those who may fulfill parenting roles, in addition to biological, adoptive, single and step-parents, such as grandparents, extended family members and foster parents.

2.E.6. Discuss social science research about the optimal outcomes for children raised in a family structure headed by two married parents.
## Optimal Sexual Development

### A. PUBERTY

Puberty is a natural biological process that produces important physical and emotional changes and is influenced by various factors, such as each individual's genetic profile and the environment.

## B. TEEN PREGNANCY

Teens who face a pregnancy before they are married encounter a number of physical, emotional, social, educational and financial challenges.

State why contraception, when used consistently and correctly, can reduce but not completely eliminate the risk of pregnancy or STDs/STIs.

Describe different methods of contraception comparing their effectiveness, limitations, and potential side effects with typical human use.

List the legal options for those facing a teen pregnancy and their associated challenges.

Investigate the rights and responsibilities of teen fathers, including legal, financial and relational aspects.

Explain how a parent, family member, or trusted adult can be a valuable resource and support for a teen facing an unplanned pregnancy.

Explain what is needed to help teens who face a pregnancy overcome challenges, plan for a positive future and accomplish personal goals.

STDs/STIs

Sexually Transmitted Diseases/Sexually Transmitted Infections can have harmful physical, emotional and social consequences and can be prevented by avoiding nonmarital sexual activity.

References: [7, 19, 191-217]

STUDENTS WILL BE ABLE TO:

4.C.1. State that avoiding sexual activity is the only 100% effective way to prevent STDs/STIs.

4.C.2. Define STDs/STIs as infections or illnesses transmitted through sexual activity that can have short- and long-term health consequences and, in some cases, be life-threatening.

4.C.3. List the major STDs/STIs, including HIV/AIDS, and describe their mode of transmission, symptoms, testing, and treatment.

4.C.4. Discuss how most STDs/STIs, when first contracted, are asymptomatic and can be spread unknowingly through sexual activity, and describe the associated health implications.

4.C.5. Explain the reasons why sexually active teens are at greater risk for STDs/STIs than adults, such as greater likelihood of more partners over a lifetime and biological vulnerability of young females.

4.C.6. Identify the potential negative health impact of STDs/STIs, including infertility, STD/STI-related cancer, mother-to-infant transmission, and emotional or relational distress.

4.C.7. Discuss reasons why rates of risk reduction, even with consistent and correct condom usage, vary for certain STDs/STIs, including whether they are transmitted by skin-to-skin contact or bodily fluid.

4.C.8. Explain the limitations of condoms in reducing the risk of STDs/STIs, such as inconsistent or incorrect use, not covering infected areas, breaking or tearing, etc.

4.C.9. List other factors that may increase risk of contracting STDs/STIs, such as multiple partners, pre-existing STDs/STIs, alcohol or drug use, sexual abuse or violence.
4.C.10. Identify STDs/STIs for which vaccinations or preventative medications are currently available, (e.g., HPV, Hepatitis B, HIV), and that require parental and/or medical consultation.

4.C.11. State the importance of seeking advice from parents, family members or trusted adults for adolescents considering or involved in sexual activity.

4.C.12. Explain the importance for sexually active teens of (1) regular STD/STI screening for sexually active teens, (2) understanding diagnostic and treatment limitations, (3) communicating with their partners regarding their STD/STI status, and (4) avoiding future sexual activity.

D. EMOTIONAL RISKS

Nonmarital sexual activity can have negative emotional consequences.
References: [218-224]

STUDENTS WILL BE ABLE TO:

4.D.1. Explain the emotional benefits of avoiding nonmarital sexual activity.

4.D.2. Articulate how the breakup of romantic relationships is frequently accompanied by strong feelings that can be amplified when sexual activity is involved.

4.D.3. Explain how teen sexual activity can lead to significant emotional health consequences, such as disappointment, regret, depression, suicidal ideation and suicide.

4.D.4. State that condom and contraceptive use will not prevent the emotional consequences that can be associated with sexual activity.

4.D.5. Identify other key relationships that can be negatively impacted when teens are involved in sexual activity, such as family, school and faith community connectedness.

4.D.6. State the importance of seeking support from a parent or trusted adult, or counselor if needed, for those who experience negative emotional consequences of sexual activity or related issues.

4.D.7. Explain that a person who has had nonmarital sexual activity can decide at anytime to avoid it, receive the physical and emotional benefits of that choice, and should not be shamed by others.

E. SEXUAL ABUSE

Sexual abuse can and should be prevented, stopped, and dealt with appropriately.
References: [49, 106, 225-258]

STUDENTS WILL BE ABLE TO:

4.E.1. State that all individuals have the right to not have another person look at, photograph, or touch the intimate/private areas of their bodies, and should not be forced to look at (in person or digitally) or touch another person’s intimate/private areas.

4.E.2. Define sexual abuse as (1) any adult sexual contact with a minor below the legal age of consent, or (2) sexual contact between adults or minors involving coercion, threat, or force, or (3) taking advantage of an individual’s inability or ignoring their unwillingness to give consent.

4.E.3. Describe how imbalances of power within sexual relationships due to, for instance, age, position, status, and ability to give consent, could be potentially used in a sexually abusive way.
List ways that different forms of sexual abuse (e.g., coercion, exploitation, sexual grooming, sex trafficking, transactions, oppression, harassment, and violence) can physically, mentally or emotionally harm a person.

Discuss typical characteristics of sexual abusers that can include familiarity to one’s circle of family or friends, insistence on secrecy, use of pornography, threats of harm, and their own history of being sexually abused.

Affirm that anyone who has experienced sexual abuse is not at fault and is not to be blamed or shamed.

Explain the importance of reporting actual or suspected sexual abuse of self or others to a parent, trusted adult, or local authority.

Discuss situations and behaviors that increase one’s vulnerability to sexual assault and abuse, such as alcohol and illegal drug use, unsafe environments, and not communicating or respecting boundaries.

Identify state and federal laws related to age of consent, sexting, sexual harassment, sexual assault, rape, and sex trafficking.

Identify harmful cultural messages conveyed in music, movies, print media, social media, sexting and pornography that objectify or sexualize people, normalize sexual violence and exploitation, encourage teenage sex, and ignore negative consequences.

Discuss potential negative consequences of sharing sexually explicit content (such as public embarrassment; bullying; exploitation; legal consequences; compromise of future college, career, or relationship opportunities).

Identify the appropriate action to take when sexually explicit content is received, such as immediately informing a parent or trusted adult, and/or a school official.

Explain how receiving payment or gifts for sex is harmful to a young person and can lead to physical violence and sex trafficking.

Identify trusted adults and professional resources to help those who have been sexually abused to heal physically, mentally and emotionally.
ADVERSE CHILDHOOD EXPERIENCES (ACEs) are traumatic events that occur during childhood which may have detrimental effects on individuals throughout their lifetime. The greater number of ACEs that occur in an individual’s life, the greater risk there is to health and wholeness.

ANAL SEX, also called anal intercourse, is the act of inserting the penis into the anus (or rectum) among men who have sex with men (MSM) and men who have sex with women (MSW). Anal sex is the riskiest type of sex for transmitting the HIV virus.

ASYMPTOMATIC in the context of STDs/STIs describes an individual who may have an infection or disease, and yet have no obvious signs or symptoms to indicate it. Asymptomatic individuals infected with STDs/STIs can still transmit infections without knowing it.

COERCION is pressuring someone to do something against their will by using physical force or threats.

COGNITIVE MATURITY is the process of brain development, which continues into the late 20s. In adolescents, the frontal lobe of the brain is still developing, which can delay mature decision-making skills.

CONNECTEDNESS is a sense of belonging and feeling cared for by others. Connectedness is important for healthy development and serves as a protective factor for youth against risk behaviors.

CONSENT is the permission granted by an individual to willingly engage in an activity. Consent must be communicated clearly and not assumed. Consent should not be given without understanding the risks and benefits involved. See also Sexual Consent, Refusal Skills.

CONSISTENT AND CORRECT CONDOM USE reduces the risk of pregnancy and STD/STI transmission. Consistent condom use is using a condom with each incidence of sexual activity, since STD/STI transmission may result from a single sexual encounter with an infected partner. Correct use encompasses a large range of details including the storage, handling and timing of application of the condom specific to the type and material make-up of the device (male, female or internal, latex, vinyl, natural, etc.). Incorrect use of a condom will increase the risk of both pregnancy and STDs/STIs.

Even with consistent and correct use, condoms do not provide complete protection against STDs/STIs. There are different levels of risk reduction depending on how the STDs/STIs are transmitted. Since condoms may not cover all of the areas of potential transmission, infections such as genital herpes, human papillomavirus (HPV), syphilis, and chancroid, which are transmitted primarily from skin-to-skin contact, have much lower protection from condom usage than infections transmitted primarily by genital fluids. Overall, correct and consistent condom use in adolescents remains low, contributing to higher rates of STDs/STIs and teen pregnancies.

CONSISTENT AND CORRECT CONTRACEPTIVE USE includes condoms as referenced in Consistent and Correct Condom Use. Consistent and correct contraceptive use means always using the method of contraception according to the manufacturer’s or health care provider’s instructions.

COUNSELORS may be professionals in the fields of social work, psychology, or healthcare. Licensing requirements vary, but all professional counselors have special training or advanced degrees to equip them to guide others toward wellness and positive life outcomes.

DATING is a behavior whose terminology is continually changing, especially among school-aged children. In this document, dating is used interchangeably with “romantic relationships” and includes relationships between adolescents that are considered to be closer than a friendship. Healthy and safe dating, delayed until older adolescence, benefits from maturity, guidance and support. Early dating has been shown to increase the risk of sexual activity.

DISCIPLINE is the process of teaching and guiding children regarding what behaviors are acceptable and unacceptable. Many different tools are used in effective discipline, including appropriate reinforcement and modeling.

FAMILY/FAMILY MEMBERS can include immediate and extended family members. A family is traditionally made up of individuals who are related by birth, marriage or adoption, or may be legally connected (such as a foster family or a guardianship).

FERTILIZATION is the fusion of an egg (a female gamete with half the number of chromosomes of an individual) and a sperm (a male gamete with half the number of chromosomes of an individual) to form a zygote with the total number of chromosomes needed to form a unique individual.

GRIT/RESILIENCE is a positive character strength that enables one to adapt, recover or overcome difficult circumstances, stressful situations, adversity, trauma, or threats. Resilience can help people achieve goals and develop self-respect when resisting social pressure to do things that may be harmful or unhealthy.

HEALTHY MARRIAGE is a mutually-committed, monogamous union of a couple, intended to be lifelong, that is granted rights and responsibilities by law. Qualities include mutual commitment, fidelity, respect, trust, compatibility, giving, service, effective communication, ability to resolve conflict, sharing of values and goals, compromise, forgiveness, and perseverance. Elements of a healthy marriage that encourage intimacy, attachment, and bonding include trust, vulnerability, and sexual fulfillment.

INCONSISTENT AND INCORRECT CONDOM/CONTRACEPTIVE USE See Consistent and Correct Use.

INFATUATION is an obsessively strong attraction to someone and can be common among adolescents. The feelings are often irrational, ignoring negative traits or idealizing the person of interest. Infatuations are usually short-lived.

A LEGACY is something that is handed down from one generation to the next. It can be something physical, but is often a concept, example, or teaching.

LOVE is a lasting commitment to the well-being of another person. It is often characterized as being unconditional, and demonstrated...
MARRIAGE is the mutually-committed, monogamous union of a couple, intended to be lifelong, that is granted rights and responsibilities by law.

MATURITY is the state of being fully developed. In human terms, it includes physical development as well as a level of cognitive, social and emotional development that would be present in an adult. Maturity is often demonstrated by consistently choosing behaviors that are healthy and socially responsible and by learning from past mistakes. See also Cognitive Maturity.

MEDICALLY ACCURATE describes medical information that is verified or supported by the weight of research conducted in compliance with accepted scientific methods and (a) published in peer-reviewed journals, where applicable, or (b) comprising information that leading professional organizations and agencies with relevant expertise in the field recognize as accurate, objective, and complete. [(Section 510(e)(2) of the Social Security Act 42 U.S.C. § 710(e)(2)]

MUTUAL MASTURBATION occurs when two or more people manually stimulate their own genitals or each other’s, in-person or virtually. While mutual masturbation is exclusive of sexual intercourse and may not be considered “sex,” there can be a risk of STDs/STIs with any contact of infected skin or bodily fluids.

NONMARITAL SEXUAL ACTIVITY is any sexual activity that occurs outside of a marriage. Sexual activity prior to marriage and sexual activity of a married person with anyone other than the spouse is nonmarital sexual activity.

OBJECTIFY is to treat others in a dehumanizing way as if they are an “object” devoid of feelings, opinions, or rights of their own. Harmful cultural messages (such as those that characterize pornography) often objectify and sexualize people.

OPPRESSION is the exercise of real or perceived power or authority over another person to cause harm. Sexual oppression is a form of sexual abuse.

OPTIMAL SEXUAL DEVELOPMENT is an ongoing process throughout the lifespan that includes the physical, intellectual, emotional, social and spiritual aspects of attaining sexual health. Optimal sexual development is influenced by many factors including guidance and support of parents, family members and trusted adults promoting positive life outcomes. In this document, the optimal sexual development approach incorporates all strategies that promote the best outcomes for school-aged children, including positive character formation, nurturing healthy relationships and postponing sexual activity until healthy marriage.

OUTERCOURSE typically refers to sexual activity that does not include oral, vaginal, or anal sex. While outercourse may not be considered “sex,” there can be a risk of transmitting STDs/STIs with any contact of the infected area or bodily fluids.

A PARENT is the biological mother or father of a child or may be a parent through adoption, marriage (step-parent), or fostering. In certain instances, grandparents or other extended family members may fulfill parenting roles. Parents are legally responsible for their child’s welfare and have the legal right to make certain decisions for their child. They have important responsibilities of providing food, shelter, love, protection, education, and guidance.

PERSONAL BOUNDARIES are self-determined limits or standards for personal behavior. These personal boundaries define the parameters of a person and affect physical, intellectual, emotional, social, and spiritual well-being. Boundaries also help identify personal ownership and responsibility. Setting, communicating and respecting personal boundaries are characteristic of healthy dating.

PORNOGRAPHY is any type of material (digital or printed) containing the explicit description or display of nudity, partial nudity or sexual activity, usually intended for sexual arousal. Pornography is correlated with a wide range of harms, including addiction and sex trafficking. It can also have a negative impact on relationships and be a form of sexual abuse.

PUBERTY is a stage of human growth that signals the developing ability of males and females to reproduce. It is a biological process that produces important physical, hormonal, and emotional changes and is influenced by various factors, such as each individual’s genetic profile and the environment.

RAPE is a form of sexual abuse involving penetration (however minimal) of the vagina or anus, with any object or body part, without the consent of the victim. It also includes oral penetration by another person’s sex organ. Statutory rape is sex between an adult and a minor below the age of consent, or where there is a defined age differentiation between those involved. Laws defining rape and statutory rape and their legal consequences vary by state. See also Sexual Consent, Sexual Abuse.

REFUSAL SKILLS are practical ways to avoid, resist or refuse to engage in unwanted or risky behaviors. Refusal skills include establishing, clearly communicating, and maintaining personal boundaries. Refusal skills help a person move away from unwanted or risky behavior, whereas consent implies directionally moving toward a behavior. In this document, refusal skills are emphasized for avoiding nonmarital sexual activity, resisting sexual coercion, and developing healthy relationships. See also Consent, Sexual Consent.

REPRODUCTION is the biological process by which a unique human life begins and grows. See also Puberty, Fertilization.

ROMANTIC RELATIONSHIPS See Dating.

SEX TRAFFICKING is a form of sexual abuse and modern-day slavery. It involves controlling a person using force, fraud, or coercion for the purpose of sexual exploitation. If the victim is a minor, any transactional sexual activity is considered sex trafficking, regardless of proof of force, fraud, or coercion.

SEXTING is sharing sexually explicit messages, including videos or photos, via a cell phone, computer, tablet or other device. Sexting can include words describing, discussing or proposing sexual acts. In many states, sexting by minors is a misdemeanor or crime, and can be considered child pornography.

SEXUAL ABUSE is a general term for sexual offenses or crimes that occur between an offender and a victim. It is any unwanted or illegal sexual advance, ranging from sexual language, to taking or showing sexual photos, to touching, to rape. Sexual abuse is illegal and carries various penalties defined by state laws.
SEXUAL ACTIVITY includes physical contact between individuals involving intimate/private areas of the body (such as outercourse, mutual masturbation, oral sex, anal sex and vaginal intercourse) that can potentially result in pregnancy, STDs/STIs and/or emotional risks. Related sexual activities can also include sexting and pornography, masturbation, or any activity for the purpose of sexual arousal.

SEXUAL ASSAULT is any illegal sexual contact that is imposed upon a person without permission or legal consent. Sexual assault ranges from statutory rape to indecent assault (illegal sexual contact without the intent of rape) to violent rape.

SEXUAL CONSENT is the permission granted by an individual to willingly engage in a specific sexual activity. However, legal sexual consent is more complicated than just giving permission. The legal definition varies from state to state and may depend on the age of the person giving consent, the age difference between the sexual partners, and the balance or imbalance of power between the parties. Also, a person’s ability to give consent may be hindered by physical or mental incapacitation. See also Consent, Refusal Skills.

SEXUAL EXPLOITATION occurs when someone uses a position of power or trust over another person for sexual purposes. The purpose of the exploitation may include monetary or social gain, as well as sexual gratification.

SEXUAL GROOMING is a technique used by sexual abusers to gain access to a prospective victim. Stages of grooming may include targeting, gaining trust, filling a need, isolating the victim, normalizing sexual activity, sexual contact, and maintaining control. See also Sexual Abuse, Consent.

SEXUAL INTERCOURSE in this document refers to vaginal intercourse, which is the penetration of the vagina by the penis, and its role in reproduction.

SEXUAL RISK AVOIDANCE (SRA) is a primary prevention approach to sexual activity focused on avoiding the physical, mental, and relational risks of nonmarital sexual activity. SRA is consistent with optimal sexual development and the attainment of optimal sexual health.

SEXUAL RISK REDUCTION (SRR) is an approach to sexual activity focused on reducing the physical, mental and relational risks of sexual activity. It is important to note the contrast of SRA versus SRR. In SRR, the degree of risk reduction varies significantly, remains unpredictable, and may not be sufficient to eliminate short- and long-term risks.

SEXUAL VIOLENCE is the use of coercion or physical force to compel a person to witness or engage in sexual activity against their will. See also Coercion.

SEXUALIZE in this document means to inappropriately impose sexual content and/or sexual values upon children, often through media.

SEXUALLY EXPLICIT CONTENT includes any offensive or graphic communication, such as language, pictures, videos, or music depicting pornography or sexual activity. See also Sexual Activity, Sexting, Pornography.

SEXUALLY TRANSMITTED DISEASES/SEXUALLY TRANSMITTED INFECTIONS (STDs/STIs) are infections, illnesses or infestations, transmitted through sexual activity that can have short- and long-term health consequences and, in some cases, be life threatening. In this document, the terms STDs and STIs are used together to cover a broader range of conditions.

STD/STI-RELATED CANCER is cancer that results directly from certain STDs/STIs, such as HPV-related cervical cancer, or as a long-term consequence of STD/STI infection in the body, such as HBV-related liver cancer. Other examples of STD/STI-related cancers include AIDS-related cancers, oral cancers and anal cancers.

The “SUCCESS SEQUENCE” refers to original research conducted by The Brookings Institution that demonstrates a reduction in the risk of poverty for those who complete high school, secure full-time employment, and get married (in that sequence) prior to having children.

A TEEN or a teenager is an individual who is between the ages of 13 and 19 years of age. The term is used interchangeably in this document with the word “adolescent.”

TEEN PREGNANCY is when a teen girl, typically unmarried, becomes pregnant. Teen pregnancy has been considered a public health concern for many years, as it usually results in physical, emotional, social, educational and financial challenges for the mother, father and child.

TRANSACTIONS in this document refer to transactional sex, which happens when there is an external motivation or payment to engage in sexual activity with someone. This may include gifts, money, or services. See also Sex Trafficking.

A TRUSTED ADULT can be trusted to have the child’s best interest in mind. Typically, trusted adults include parents or legal guardians, as well as teachers, healthcare professionals, counselors, law enforcement, and school personnel/officials.

TYPICAL HUMAN USE in this document refers to the typical human use of contraception. The rate of risk reduction is determined by how consistently and correctly contraceptive methods are used. This rate is in contrast with “perfect use” rate or rates that come from clinical laboratory or tightly controlled research use.

VAGINAL INTERCOURSE is the penetration of the vagina by the penis. In this document, vaginal intercourse is used interchangeably with sexual intercourse. See also Sexual Intercourse.

VALUES are guiding principles, standards, or qualities which are reflective of morals, ethics and/or spiritual beliefs. Values can be a major motivating force, and influence decision-making and goal setting. They can be shaped by many influences including parents, family members, trusted adults, life experiences, peers and media.

A STATE OF WELL-BEING indicates that positive attributes outweigh any negative attributes that might be present. In physical well-being, the physical attributes of health and wellness outweigh any existing minor risks to the body.

WHOLESOMENESS is the completeness demonstrated when a person’s physical, intellectual, emotional, social and spiritual aspects are in a balanced state of well-being. Wholeness is associated with thriving and flourishing, and the ability to maintain health and enjoy healthy relationships.
